#Question 1

#To find the vectors greater than two I put in the following function

```
vectors_greater_than_2 <- rooms[rooms > 2 & !is.na(rooms)]
vectors_greater_than_2
vectors_greater_than_2
[1] 5 3 3 3 8 3 4 3 7 4 3 7 3
```

#Question 2

```
class(rooms)
```

#When you type in this function you get

```
class(rooms)
[1] "numeric"
```

#Question 3

#At first when you type in median(rooms) it will tell you

median(rooms)

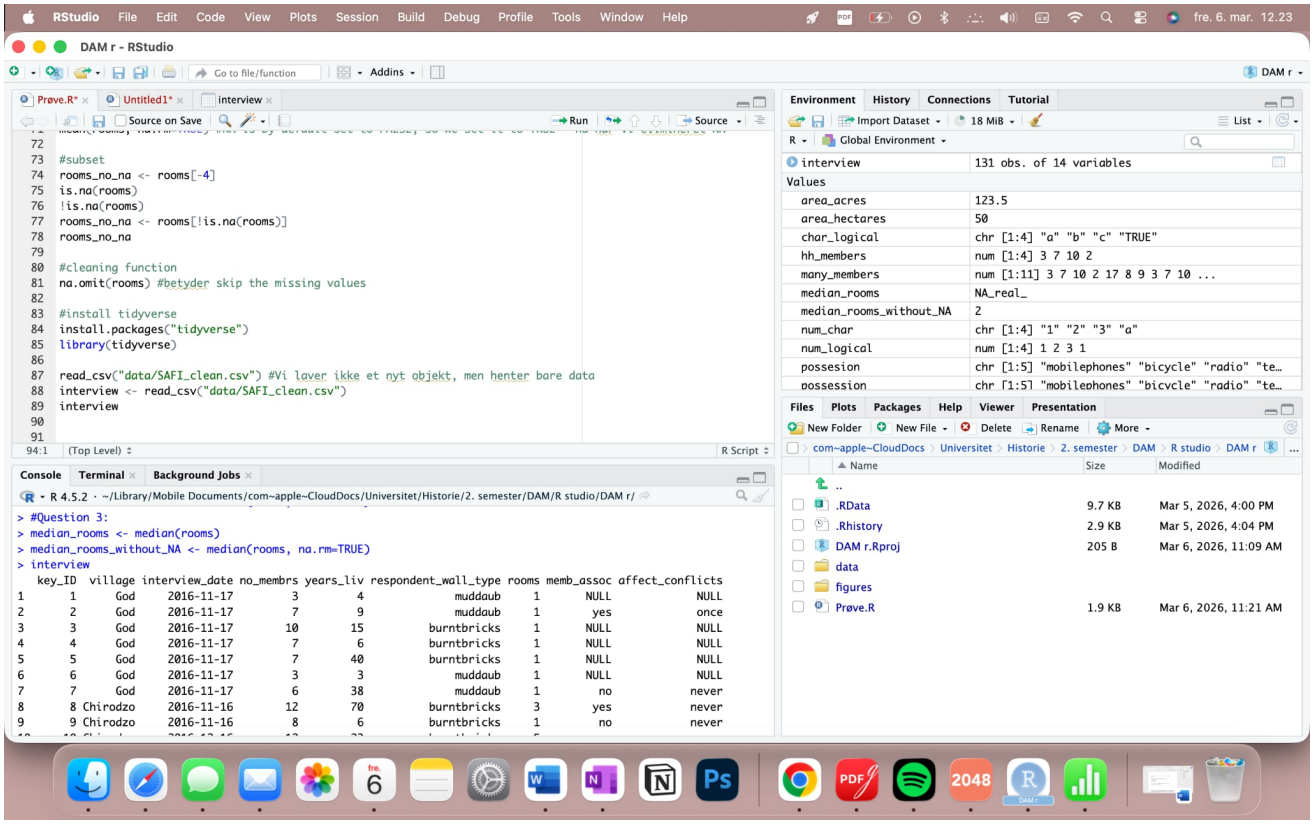
[1] NA

#To remove NA I put in the following function

median_rooms_without_NA <- median(rooms, na.rm = TRUE)

#It then becomes 2

median_rooms_without_NA

[1] 2


#Question 4
